

To whom it may concern.

I am a Senior Engineering Project Manager for Bristol Water PLC, with responsibility for water treatment process upgrades and the installation and commissioning of new treatment works. I have occupied various process and engineering roles for the Company over the last 15 years. I have known, and worked closely with Enterprise Pipework Services (EPS) Ltd for the last 11 years. The work carried out by EPS Ltd for Bristol Water ranges from straightforward mechanical installations and repairs, to the installation and commissioning of dosing equipment for potentially hazardous chemicals (e.g. 98% Sulphuric Acid, 48% Sodium Hydroxide, Potassium Permanganate) where fine tolerances apply and a high standard of workmanship is required. In addition, in the last 6 years EPS have regularly acted as Principal Contractor for larger process schemes, with a contract value up to £2 million.

The quality of the work undertaken by EPS Ltd remains consistently high, regardless of the scope and scale of the work, or the working conditions and timescales required by Bristol Water (on an operational site mechanical work is often required at very short notice). However, it is the 'added value' which sees EPS Ltd firmly at the top of Bristol Water's preferred contractor list for small works (less than £2 million). EPS Ltd directors Mark Bingham and John Dunn bring vast experience and an in-depth knowledge of most things mechanical; detailed knowledge dosing rigs (liquid and powdered chemicals), pumps, valves, and pipework, are all particularly relevant to a potable water supply company. Indeed, EPS Ltd regularly use their experience to assist Bristol Water in the design of many schemes. In addition, EPS Ltd have excellent health and safety procedures and safe systems of work, and good knowledge of all relevant health and safety regulations. Furthermore, EPS Ltd offer a very good standard of documentation, from risk assessments and method statements, to the actual technical documentation associated with the work at hand.

I would recommend EPS Ltd without reservation for any mechanical work in a process or production environment. I would be happy to discuss the content of this letter, or provide further information (contact details below).

Yours sincerely,

Rex Lewis
